

TC STUDIO ↙

Designed by Tianyi Chang, the Tubular barstool is created from powder coated steel rods and tubes. This combination of different industrial material creates a striking visual and yet surprisingly comfortable experience. The Tubular barstool is produced in limited quantities. It comes in powder-coated white and bespoke colours are available upon request.

MAINE ↙

Maine Pedestals complement desks and workstations as they are designed to coordinate with the current demand and trend for slimmer, stylish office furniture. Maine pedestals are both flexible and secure, with a range of internal configurations and sizes. They are designed and precision engineered with one piece of steel wrap, which ensures smooth, clean lines and inherent strength. They are manufactured by Maine in the UK and are 98% recyclable.

WHITEWALL ↗

Whitewall is an online art market with its own professional photo lab. Photographers can upload their work, colour manage and print images up to six metres in length using modern machines. There are 2800 different modes of framing and mounting available at affordable prices. Also, it is a platform for artists and photographers to gain exposure by sharing work with other people wanting to buy and sell images. There is also the chance for users to create their own gallery/portfolio online. This innovative platform concept has a personalised address - WhiteWall.com/user's name, where the contents of the users gallery are stored and presented.

DESIGNATICS ↙

The Sonic chair is now available in two new versions - the Sonic chair dock and the Sonic chair touch. The Sonic chair dock, pictured has an iPod dockingstation, which allows an iPod to be directly connected to the high quality soundsystem and at the same time get charged. A personal experience of the sound is produced through the speakers around the inside of the chair. The Sonic chair touch is equipped with the most up to date computer technology in addition to a 20" touchscreen, ideal for all multimedia-based presentations.

SVEN CHRISTIANSEN ↙

The shape of the new compact wave desks recently launched by Sven Christiansen enables users to work facing into the corner of the desk, maintaining a comfortable distance to the monitor and plenty of leg room - yet saving valuable space. The compact wave desks take advantage of the change to modern LCD monitors and drop in reliance on paper to reduce the workstation footprint by 200mm from conventional desk dimensions - an important space-saving in an office, resulting in practical, compact workstations. They are available in five widths, with or without an integral pedestal, and in a wide range of both MFC and veneer finishes.
