

sit inside sound

© sonic chair

Have you ever sat inside headphones?

The **sonic chair** provides a unique audio experience, allowing you to sit at the very centre of a sound system. Whether you enjoy listening to symphony orchestras, rock concerts, or audio books – the integrated satellite speakers are precisely adapted to your ears. The speakers are encased in a carefully crafted body that creates sufficient volume for powerful bass tones, while a specially developed body-focused sound membrane serves as backrest and further augments the lower frequencies – creating the feeling of a live performance.

The open design ensures a resonance-receptive, well-balanced sound environment. Background noises will not disrupt the enjoyment of music or an audio book in the **sonic chair**. The active and passive sound insulation creates an acoustic island.

You sit at the very centre of the sound system – wherever you are.

Regardless of whether you are sitting in a hotel lobby, an airport lounge, a bookshop, or a music store, the **sonic chair** will provide both exceptional listening pleasure and unique ambience. The sonic chair combines the functions of a comfortable lounge chair and an audio station in a single product.

You can even connect your iPod or laptop and work without distraction, or listen to the latest CDs or audio books. The **sonic chair** is also ideal for waiting areas and for presenting music, audio books, films and texts at trade fairs, exhibitions and museums.

Lean back, turn up the volume, relax

- open design for a highly resonant sound environment
- passive and active acoustic insulation (phase angle)
- large body-focused sound membrane as backrest
- seating ring can be rotated (up to 350°)
- pedestal is made of stainless steel with concealed cables, a five-star base optional

Please choose your favourite colour out of a broad range!

Not only the technical features, but also the look makes the sonic chair an eye-catcher.

outside: top-grade leather, synthetic leather optional

inside: sueded microfiber (>Loop< from Kvadrat in 35 colours)

First-class sound transmission

- a circular acoustic enclosure with 32 litre speakervolume
- specially developed four-channel amplifier in patented class D technology to allow separate regulation of both stereo channels, the subwoofer and a body-focused sound membrane
- equipped with high-quality loud speakers featuring separate tweeters and mid-woofers as well as a Scandinavian-made woofer from SEAS
- crossovers especially designed for the sonic chair in a 12 dB filter topology with high-end air-core coils and foil condensers
- support of the low frequency range from 16 to 40 Hz through silent physical vibration

Diverse input jacks for peripheral equipment

such as laptops, stereos, CD players, iPods or X-Boxes/PS3

Additional features mounted on a folding stainless steel arm:

- **with round sidetable** from mineral acrylic
- **iPod docking station:** charger and an iPod connector
- **with computer:** iMac 20" touchscreen
- **with laptop sidetable** from mineral acrylic

Prices on request.

Individual solutions corresponding with your corporate design can also be offered.
